*"Some call it a Manual"*

## Summary

**In**

**Signal routing, ith ADSPA link**

When the LADSPA Fx unit is working, the signal is routed as follows :

- A plugin port *cannot* connect to a plugin port - that's what nodes are good for...
- *All ports* of all plugin , audio and control, must be connected. Use a *dummy node* for 'open' input .
- Signal loops are not allowed
